Environmental Statement

Morley Waste Traders Ltd recognises that environmental issues are of fundamental importance to a successful and responsible business strategy. Therefore it is committed to minimising the environmental impact of its operations wherever possible.

In line with this commitment to the environment Morley Waste Traders Ltd will: -

- Ensure that its operations comply with all existing and proposed legislation
- Minimise energy wastage and waste wherever possible and practical
- Train and educate its workforce in the relevant aspects of environmental best practice
- Review its environmental policy on a regular basis

The company continues to work with the regulatory bodies in order to minimise the environmental impact of any breach of legislation, and to prevent the recurrence of all such events.

Only one incident in 1996 led to action by the regulatory bodies, and this incident was dealt with promptly and without pollution occurring, thus preventing any enforcement action.

The Company's catchment area covers the whole of Northern England, and the company provides a disposal point, which prevents wholesale spoiling of the environment by random tipping. The object is to recycle all material wherever possible, and the company will provide advice in situations where waste is environmentally unfriendly and cannot be accepted by industry.

Within the last twelve months the company has taken action to reduce any harmful emissions emanating from its furnace, and has invested in plant to recover even more product from the materials supplied to it, thereby reducing the amount of materials wasted and sent to landfill sites.

The company is also aware of the effects of noise and dust pollution of the environment and the detrimental effects on the lives of the public where such pollution occurs near residential areas. With this in mind, the company has spent in excess of £500,000 in the last eighteen months to modify production procedures to substantially reduce such pollution. Further changes in procedures are planned within the next twelve months, which should improve matters still further, as well as leading to improved operating efficiency. The company has a policy of continuous review and improvement where possible in these areas.
